

DE 19546786A1

Column 3, lines 48 - 59.

A continued education of the device for this invention of the reason execution exists therein to arrange the screens coupled over a hinge-like connection together soluble to each other. This entails the advantage that in place of the one screen over contact elements, that are arranged for example at the other screen, a keyboard in the requirement case ankoppelbar is. If the keyboard is not required, it can be separated to the weight saving by the device. Furthermore it is shut together possible, the one screen together with the coupled keyboard such as a book.

Claim 14.

Device after one of the requirements 1 to 6, by the fact characterized that the screens (403, 404) are solvable connected for the indicator plant (402) by means of plug contacts (411) with one another.

Abstract

The device (1) has a housing (9), a data memory and a data output unit, a data display unit (2), a computer, a power supply unit and an external connection (18). The data display unit consists of two LCD screens which can be separately controlled and which are mounted in "book" form. The two screens (3,4) take up the whole extent of the housing on both sides, and have a hinge (16) connection. In the case of several pages, the key (6) turns the pages either backwards or forwards. The setting unit (17) adjusts the display.
